BOATANCHORS Digest 3810

Topics covered in this issue include:

- 1) phono pickup needed
by "b. smith" <smithab11@comcast.net>
- 2) FS: Hallicrafters keyer, Vibroplex paddle, Millen dipper
by Avery Comarow <acomarow@usnews.com>
- 3) Neat rig seen... rebadged Globe Trotter
by john <johnmb@nc.rr.com>
- 4) RE: Neat rig seen... rebadged Globe Trotter
by "Richard W. Solomon" <w1ksz@earthlink.net>
- 5) RE: Neat rig seen... rebadged Globe Trotter
by john <johnmb@nc.rr.com>
- 6) Re: freq. xtals vs phono pickups
by "Dr. Barry L. Ornitz" <ornitz@charter.net>
- 7) Re: McElroy rig seen... rebadged Globe Trotter
by Niel Wiegand <nielwiegand@aggienetwork.com>
- 8) Re: McElroy rig seen... rebadged Globe Trotter
by john <johnmb@nc.rr.com>
- 9) Re: McElroy rig seen... rebadged Globe Trotter
by "Art Lebermann" <artleb@earthlink.net>
- 10) [Radiomarine] KPH Event Successful
by Richard Dillman <ddillman@igc.org>
- 11) RE: [Radiomarine] KPH Event Successful
by "Ed Zeranski" <ezeran@ezeran.cnc.net>
- 12) Re: [Radiomarine] KPH Event Successful
by WA5CAB@cs.com
- 13) Re: McElroy rig seen... rebadged Globe Trotter
by john <johnmb@nc.rr.com>
- 14) WTB Collins 516F-1 and 312B-2
by "Freeberg, Scott (STP)" <Scott.Freeberg@guidant.com>

Speaking of phono pickups , I need one (old style uses steel needle) to fit
the tone arm
of my military recorder player.

Here's one I've never seen before. Check Ebay :

<<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4675&item=5775054696&rd=1&ssPageName=WDVW>>

Or item # 5775054696

Never heard of a McElroy rig before... but it's really a clone of a Globe Trotter.

Anyone ever seen one of these before?

Hi Dick,

Sure, of course, but the rig in the picture is a Globe Trotter (Leo M's early rig)
that's rebadged....

Hi folks,

I was just reading the digest when I came across this thread.

Tom, N4UG wrote:

> Yes, the BSR worked because it is the proper type of

Tom is quite correct. Rochelle Salt, or Seignette Salt as it is sometimes called in Europe, is highly piezoelectric. It used to be used in most audio transducers such as microphones and phono pickups but today these applications generally use ceramic elements, such as barium titanate, to avoid the problem with humidity (high AND low) affecting the Rochelle salt. This compound is chemically the double salt of potassium sodium tartrate. It forms orthorhombic crystals from solution, and in addition to its piezoelectric properties, the crystals are also double refractive. The chemical formula is $\text{KNa}(\text{C}_4\text{H}_4\text{O}_6) \cdot 4\text{H}_2\text{O}$. The engineering fundamentals website gives some physical

properties in Strain-Charge format {mathematics warning for the impaired, vector and tensor format}. The units of compliance are in meters squared per Newton, those of piezoelectric coupling are coulombs per Newton, and those of relative permittivity are in Farads per meter. See http://www.efunda.com/materials/piezo/material_data/matdata_output.cfm?Material_ID=Rochelle_Salt for details.

Rochelle salt used to be found in every corner drugstore, from the days when it was used as a mild purgative. Many children would use it in science projects as growing crystals from the saturated solution is quite easy. While not easily found these days, I am sure a druggist could order it for you.

If you are really into homebrewing in a big way, you can make your own Rochelle salt from baking soda and cream of tartar. This might be fun, but without access to pure materials, I would suggest buying the Rochelle salt from a laboratory supply. See <http://www.seawhy.com/xlroch.html> for detailed instructions. Growing the crystals from a saturated solution is described at <http://www.seawhy.com/xlone.html>.

One possible source of already grown and cut crystals of Rochelle salt are surplus hydrophone and sonar transducers. I have occasionally seen these at hamfests. They are usually encased in a rubber housing. Look carefully for damage before you buy one of these. Once the crystal gets wet again, it dissolves. Exceptionally dry air or vacuum also destroys these crystals. The units I saw at hamfests seemed to be pretty banged up, and I doubt if the crystals survived.

Earlier I mentioned that certain ceramic materials like barium titanate are piezoelectric. These materials also possess a high dielectric permittivity so they are used to produce the High-K ceramic capacitors. The use of these capacitors in audio circuits sometimes leads to interesting effects such microphonic pickup by the capacitors, and "singing capacitors".

Some of the early history of Rochelle salt as a piezoelectric is fascinating. A brief summary can be found at <http://www.ieee-uffc.org/ferroelectrics/review/articles/e003/e0030291.pdf> which even notes some rather famous names in physics such as the Curies (Pierre and his daughter, not wife, Marie), Pockels, Valasek and Cady who all worked with Rochelle salt crystals. [If anyone has a copy of the book "Piezoelectricity" by Walter Cady at a reasonable price, I would love to add it to my collection.]

Tom French's book on McElroy makes no mention of his manufacturing ham gear other than keys, bugs and code practice equipment. It does, though, list the McElroy Manufacturing Corp. Looks to me like McElroy made a brief try at getting deeper into the ham market.

I'm the "lucky" bidder for this rig - and I probably paid too much.
However, I've been looking for a "vintage" transmitter in good condition -
and this one seems to have some interesting history connected to it.

There was an article on this rig, published in Issue #24 (July 98) of "the
Vail Correspondent". This newsletter (no longer published) was dedicated
to "key collectors", but made an exception in running an article on a
transmitter that had the "McElroy" name. Tom French says that he has a
chassis and front panel from a McElroy MT-35, and knows of two complete
transmitters (one was donated to the AWA museum?). It will be interesting
to do a little more research!

Does anyone have detailed info (photos?) on the WRL Globe Trotter? I'd
like to compare circuits, chassis, and panel layout.

73,

Subject: [Radiomarine] KPH Event Successful
Content-Type: text/plain; charset=US-ASCII
Content-Transfer-Encoding: 7bit

The Sunday KPH event was a great success. The SS Jeremiah O'Brien/KXCH was indeed on the air on MF, this announced by the classic sound of a Radiomarine 3U main transmitter tuning up. It's unmistakable and sound as if someone is stepping on a cat.

We received their QTO and later exchanged formal radiograms to and from the MRHS and the master and crew of the JOB. Interestingly, neighbors of the captain just happened to drop by the station. When we told them who we were working they filed a radiogram for him then and there, which was immediately delivered to the ship. A reply was received later in the day. Each time KXCH moved from 500kc to its working frequency of 425kc and back to 500kc there was more cat stepping, to the

great enjoyment of all at KPH. In all we sent 3 messages and received 3.

Between message exchanges we sent press and weather on 426kc so they could "perfume the air" of the radio room with real Morse.

And yes, the silent period was scrupulously observed on 500kc.

If anyone copied any of these transmissions, please let me know.

VY 73,

RD

OK. I'm finally going to bite. Why would a Radiomarine transmitter sound unlike any other transmitter being tuned up? I've tuned up a TDH (only 3KW). Sounds just like tuning up a BC-610 or a TCS. It just gets louder.

In a message dated 5/22/2005 11:53:36 PM Central Daylight Time, ezeran@ezeran.cnc.net writes:

Art,

I've got a complete 'Trotter and will be glad to take pictures!

John K5MO
